There are 2 pieces of handle bars, left and right.

Screw on the handle bars from left and right side respectively.

5.3 It is assembled ok as below picture. Please make sure it is tightly connected.

6. Safety instructions

- Rider must wear protective equipment like head helmet ,knee pad, elbow pad and others when riding.
- You should not drive on motor roads and crowded places. And you should not carry kids or other people with you when you are on the vehicle. You cannot ride on stairs and escalators. Please, keep speed as low as possible (3-10 km/h) or stop when meeting road bumpers, elevator and pot hole.
- It is more than a sport entertainment item than a proper transportation vehicle. But when you drive on public areas, it has vehicle attributes. So it has safety risks as any other vehicle. You must drive according to user manual to be protected and to protect others' safety
- However, you should understand that: once driving into public roads or other public areas, you might face the risk of penalty or punishment because of a motoring offense or an improper operation of other people or vehicles, even if you operate as the manual says. Like all vehicles, the faster you drive, the longer the braking safety distance is. Emergency braking on smooth surfaces may make you lose balance. So you must stay alert drive with an appropriate speed and keep adequate safety distance with other people and vehicles during driving. Please keep low speed and stay alert when driving into unfamiliar places.
- Please, respect the right of the way when driving. You must avoid scaring pedestrians, especially children and the elderly . Remember to decelerate when passing behind pedestrians. It is preferable to ride on the cycling path. When facing a pedestrian, keep going straight and decelerate.
- Driving in countries and regions without national standard and rules related with such scooters, you must obey the user manual's requirements. Stolen, human accidents, legal disputes and every other adverse event caused by a behaviour violating the manual's instructions won't be taken in charge by our services
- To avoid injuries, please do not lend your product to people who do not know how to use it. You must teach them how to use the vehicle and tell them to wear helmet and protective gears when driving.
- Please check the vehicle before driving. If you find obvious abnormality like missing pieces, battery life reducing excessively or too much noise, please stop using the product immediately and contact our customer service to get a professional help about the product and the maintenance.

7. Daily maintenance

7.1 Storage and cleaning

If spots appear on the vehicle's surface, wipe it with a soft wet cloth. If there are stubborn spots, you can wipe it with a soft cloth and toothpaste. Then clean with a wet cloth.

Reminder: Don't clean with alcohol, gas, kerosene or other corrosive and volatile chemical solvents. It will badly damage the appearance and internal structure of the vehicle. Washing by spray with water under pressure is forbidden. You must switch off the vehicle and unplug the charging cable and clog charging rubber cover. Otherwise, you may get an electric shock or it may seriously damage the vehicle because of flooding water.

Product must be stored in a dry, cool room when you don't use it. Try to avoid letting it outside for a long time. Outdoor environment with sunlight exposure, overheating, rain, etc. will accelerate the ageing of appearance and wheels and reduce battery lifetime.

7.2 Battery maintenance

Please don't use battery in environment with over 50 °C or under -20°C. For example, don't let the battery in your car with sun exposure. You must not put the battery into fire, it will damage it. Please refer to the battery nameplate under the vehicle to know the other maintenance tips.

Try to charge the vehicle frequently it can extend battery life. Besides, using at a normal temperature, battery can have long endurance distance and good performance. If you use it under 0°C, battery life and performance will be reduced. Under -20 °C, endurance distance may be reduced compared with normal temperatures.

Reminder:

Fully charged Scooter will run out of power after 90-120 days in standby mode. The stored power will run out after 20-50 days in standby mode. **If it is not fully charged and if you don't charge it in time, it may cause damages to the battery capacity for excessive discharge and this damage cannot be recovered.**

So this scooter should be charged periodically by month to make sure battery alive.

Warning:

Non-professionals should not disassemble batteries because it may cause safety issues by electric shock.
